

Project Overview

Meeting with Quayside Community Board February 23, 2022

Agenda

- Project overview
- Bridge connections in New Westminster and Surrey
- Urban integration
- Construction update
- Contact the Project
- Discussion

Bridge design

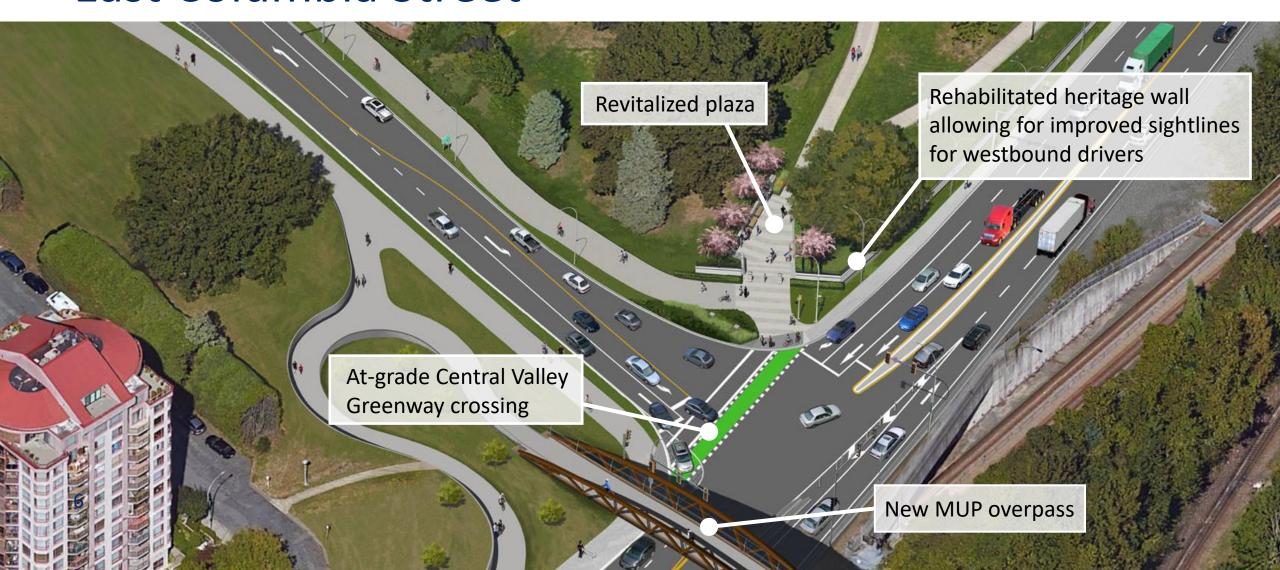

A safer and more reliable crossing

Connections in New Westminster

A safer intersection at McBride Boulevard and East Columbia Street

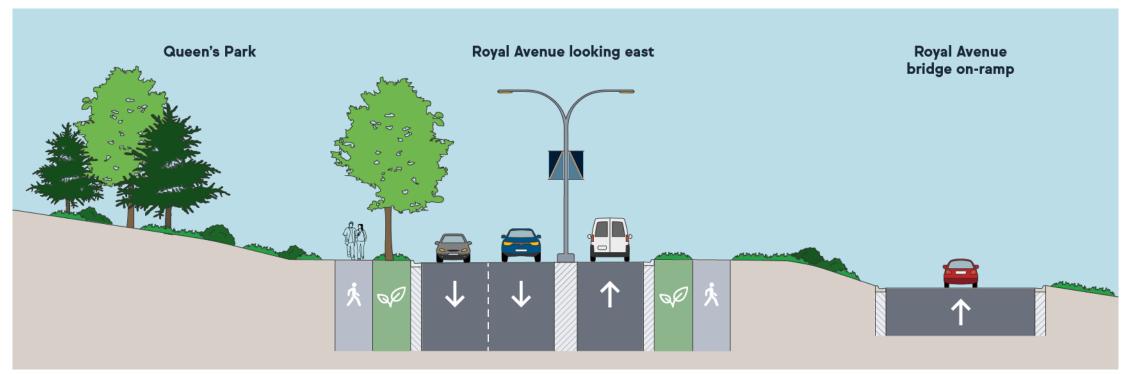

Connections in Surrey

Urban integration

Many urban design features are being incorporated, including boulevards, landscaping, street furniture, and wayfinding

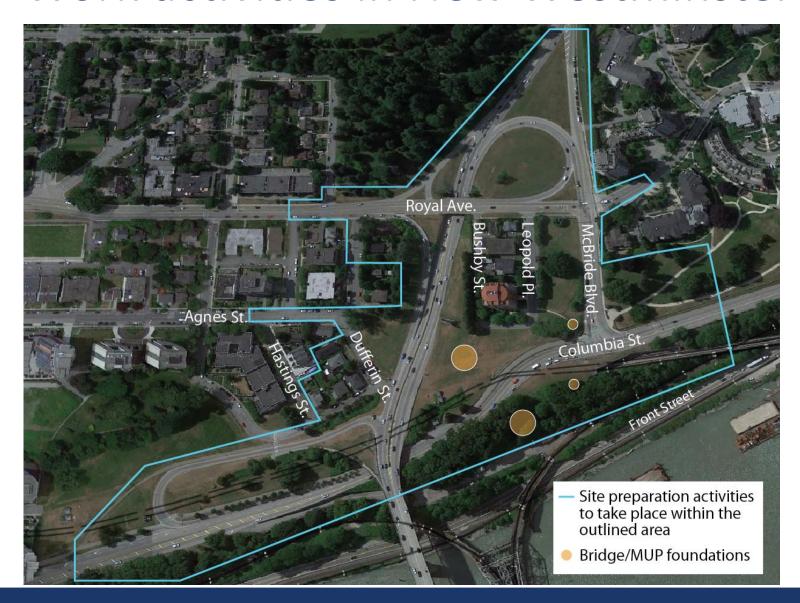

Construction update – February 2022

- In-river pile driving on the main bridge tower is complete – crews are now working on the pile caps
- In-river pile driving on the second foundation will begin this summer
- On-land foundation work is ongoing in Surrey and New Westminster
- Site preparation work in New Westminster is ongoing

Work activities in New Westminster

Bridge foundation construction in New Westminster – drilled shafts

- Install temporary casing (approx.
 5-10 metres in length)
- Use auger drill to get to required depth (25 – 30 metres)
- Insert reinforced steel into augured hole
- Fill with concrete

Mitigation measures

Noise Management

- Drilled-shaft methodology used instead of hammer pile driving for on-land bridge foundations in New Westminster
- Noise barriers
- Work will be done during the daytime as much as possible

Air quality management

- Ongoing dust control measures
- Anti-idling policy for equipment and vehicles

Other upcoming work in New Westminster

- In-river bridge foundation (closest to New Westminster)
- Royal Avenue overpass spring/summer 2022
- Intersection improvements at McBride Boulevard-East Columbia Street spring 2022
- Utility relocation summer 2022

Front Street closures

- Full closures and detours will be required
- Closure between Begbie Street and East Columbia Street
- A comprehensive traffic management and communications plan will be in place
 - Local and regional signage plan
 - Communication with local and regional stakeholders
 - Communication with residents, resident associations, and road users
 - Traffic control personnel will assist with pedestrian and cyclist movements at the McBride Boulevard-Royal Avenue intersection during peak hours
